

1. PixelProof AI image detection

Türk Telekom

Efe Han Keleş, Computer Science and Engineering

20 July–18 September 2026, 40 approved internship days

Fatih Sultan Mehmet Mah., Balkan Cad. No:49, 34771 Ümraniye / İstanbul

Objective

Reduce false AI warnings on real photographs while preserving AI detection. Explore local AI edits.

Outcome

Working local demo and documented experiments.
On reused development data: 159/160 AI detected per condition.
Real false warnings: 0/160 original, 14/160 after processing.

Limit

One new AI miss prevented full acceptance.
Broader reliability and Model2 remain unproven.
